BASELINE RISK ASSESSMENT

AS PER CONSTRUCTION REGULATION 5(1)(a), 2014 OCCUPATIONAL HEALTH AND SAFETY ACT, NO. 85 OF 1993

PROJECT:

CONSTRUCTION OF MATLA 2 PRIMARY SCHOOL

PREPARED BY

This document is prepared on behalf of the Client in terms of Construction Regulation 5(1)(a). The Baseline Risk Assessment is conducted to obtain a benchmark of type and size of potential hazards pertaining to the project. The aim is to identify all major and significant risks.

Doc No: SHE/BLRA/DBSA/M2/2021/00

1. Objective

The objective of this baseline risk assessment was to identify and categorise the low to high hazards associated with performing tasks during different work categories.

The evaluation of results will assist management to eliminate, minimise or control risks to workers associated with the tasks performed or exposure to the working environment.

This risk assessment was also conducted to assist management in identifying training needs in order to concentrate efforts where it is mostly needed.

- 1.1 According to the **Occupational Health and Safety Act 85 of 1993**, all companies must assess where they stand in terms of risk, identifying the major risks which they are exposed to thereby establishing their priorities and a system for future risk control. A baseline risk assessment must be comprehensive and may well lead to further, separate and more in-depth risk assessment studies.
- 1.2 The baseline risk assessment should be reviewed periodically, about every year, after every accident/incident, change of work force or change of plant/equipment to ensure that it is still relevant and accurate. Any other studies will need to be incorporated to achieve a 'complete picture''.

2. Scope of Works

The Project scope is the Construction of Bergman Secondary School.

The scope of work will include the following:

Buildings:

- Refuse area
- Admin
- Hall
- Media and two computer classrooms
- Three Grade R Classrooms
- Two classrooms, two storerooms and ablution
- Four classrooms and four storerooms
- HOD, Multi-purpose Classroom and Ablution
- HOD, Science and Ablution
- Tuck Shop and Change Rooms
- Caretaker
- Security
- Five Classrooms and six Storerooms
- Pump house
- HOD, two classrooms, two storerooms and ablution
- Three Classrooms and four storerooms

External Works:

• Plumbing - complete the vent pipe, toilet pan and seat, hand wash basin, taps, urinals, and paraplegic facility

Prepared by:	SHE Group
--------------	-----------

- Parking area, assembly area and courtyard consisting of excavations, backfilling, layer filling, compaction and paving
- Walkways and aprons consisting of excavations, back filling and reinforced cast in panels.
- Walkways and aprons consisting of excavations, back filling and reinforced cast in panels.
- Covered walkway and parking consisting of bases with square steel columns, steel beams, rafters and purlins with IBR roofing

Water Reticulation:

- High 64.80kl water tank comprising of galvanized steel structure bolted to reinforced concrete bases complete with ladders, platforms for tank to rest on, etc.
- Water reticulation complete with water pipes and fittings from elevated water tanks to drinking fountains, hand wash basins etc.
- Drinking fountains drinking fountains with stainless steel water taps, piping, fittings, etc.

Electrification:

- Supply of Electricity
- Installation of conduits earthing, cabling, DB, light fittings, light switches, plug points, dedicated plugs, etc.
- Testing and Commissioning

The construction work on project will entail, but not be limited to the following:

- Site establishment
- Site clearance
- Bulk Earthworks
- Bulk services (water, sewer and electrical)
- Structural Steel Work
- Brickwork
- Concrete works
- Water reticulation
- Electrical work
- Asbestos work

Also refer to the Design Report and Scope of work as per Bill of Quantities.

3. Risk Analysis Method

The risk analysis considered all the tasks as described in the safe work procedures developed for this specific operation.

The risk analysis included

- a. Description of the task/system under analysis.
- b. Evaluation of each risk by determining the probability of recurrence and severity of each event.

- 3.1 Evaluation of current and planned controls, barriers and safeguards.
- 3.2 A selected team of personnel were involved to conduct this on the job task analysis to determine baseline risk assessment

4. Determination of Levels of Risk

- c. Risks associated with each step in the operational process were considered.
- d. The following factors were considered and rated in accordance with the effect it would have on the items described below, should the event occur:
 - Threat to the health and safety of a worker
 - Severity of the event
 - Likelihood of the event happening
 - Event consequence

A risk level was attributed to each event in the following manner:

Low risk	=	1-6
Medium risk	=	7-15
High Risk	=	16-24

6. Risk Ranking & Calculation of risk

6.1 Risk Ranking:

Consequence:

Fatality or permanent disability	-	5
Major Injury	-	4
Average lost time injury	-	3
Minor Injury	-	2
Medical treatment only or less	-	1
Probability:		
Common Occurrence	-	5
Has Happen	-	4
Could Occur	-	3
Not Likely to Occur	-	2
Very Unlikely	-	1

6.2 Calculation of Risk:

Consequence: Probability = Risk Ranking (see table in risk assessment)

7. Evaluation of Results

Activities listed in the high risk categories must be seen as tasks requiring immediate attention. Training will, in most instances, solve the problem satisfactorily.

An implementation plan may then be devised to address the outstanding issues. This action plan must take cognisance of the hazards that should be eliminated concurrently.

8. Abbreviations used in Risk Assessment

- DSTI -Daily Safety Task Instruction
- HIRA Hazard Identification and Risk Assessment -
- Hazardous Chemical Agents HCA -
- Planned Task Observation PTO -
- Personal Protective Equipment PPE _
- Safe Operating Procedure SOP -
- Safe Work Procedure SWP -

9. Assessment Team

The following people were involved in establishing the relevant task groups and analysis.

_

_

_

- F du Toit
- N de Bruyn

Pr. CHSA

W Venter

- Risk Assessment Team Leader
- **Risk Assessor**

S Marais

Designer

10. Task Specific-Risk Assessment

Should the baseline assessment indicate tasks in High risk a specific task risk assessment must be conducted. This assessment will then target the specific tasks and the hazards attached to it.

N de Bruyn Risk Assessment Team Leader

	Activity	Task	Potential Hazards	Risks	С	urrent R	isk	Suggested Control Measures
Step No	List activity steps	List task steps	Potential dangers that could cause harm. List the potential hazards	Potential Risks due to Hazard	PROB	CON	Ranking	Controls already in place to mitigate the hazard before work may commence
		Removal of existing roof coverings and	Tripping over obstacles and objects	Injuries	3	3	9	 High standards of housekeeping to be maintained Stacking and storing inspections to be conducted on a monthly basis
		coverings	Manual handling of material	Injuries	2	2	4	 Task specific training to be provided to employees. Ergonomic risks to be taken into account
			Manual lifting of material while working at heights	Employees falling from heights causing serious injuries of fatality	3	5	15	 Employees conducting roof work to follow the correct procedures. Scaffolding to be erected in accordance with SANS 10085 Safety harnesses to be worn when working at heights
13	Roof Work		Employees conducting work under overhead work	Falling objects causing head injuries / bodily injuries	3	4	12	 Overhead work to be barricaded Signage to be displayed Head protection to be worn by employees where falling objects poses a hazard
		Removal of existing roof coverings and installation of new roof coverings	Scaffolding use to access the roof work poorly erected	Fall from heights / fatality	3	5	15	 Competent Scaffold Erector and Inspector to be appointed in writing Roof work / scaffold work to be supervised
			Working at heights	Employees falling from heights causing serious injuries of fatality	3	5	15	 All employees working at heights to be declared fit for work at heights. Scaffolding to be erected in accordance with SANS 10085 Safety harnesses to be worn when working at heights. Anchor points to be installed and retractable lifelines and / or similar devices to be used when conducting roof works

	Activity	Task	Potential Hazards	Risks	Current Risk		sk	Suggested Control Measures	
Step No	List activity steps	List task steps	Potential dangers that could cause harm. List the potential hazards	Potential Risks due to Hazard	PROB	CON	Ranking	Controls already in place to mitigate the hazard before work may commence	
17	Transmittable Diseases (e.g., COVID-19)	Coming into contact with other workers. Normal working activities on site	Workers exposed to Health Hazards namely Diseases / Bacteria / Viruses (e.g. COVID- 19)	Serious illnesses due to Health hazards. Contracting disease.	4	5	20	 Revise Health and Safety Management Plan to include planning around COVID-19 and in accordance with measures and Regulations set out by Government Compile and implement a Risk Assessment and Safe Operating Procedure in accordance with measures and Regulations set out by Government Toolbox talks / other gatherings / meetings to be held in small groups Emergency Response and Prevention Plan to be developed and implemented Employees to be trained in the content of the risk assessments revised H&S Plan, COVID-19 Risk Assessment Other informal training / communication pertaining COVID-19 Implemented. Employees to be implemented. Employees to keep a fair distance of 1.5 to 2 meters from co-workers Contractor to implement a self- screening tool by means of a questionnaire. This must be kept on record for all employees. This must be done prior to employees / visitors/ contractors entering the site It is recommended that a daily infrared temperature test is conducted on all employees 	

	Activity	Task	Potential Hazards	Risks	Current Risk		isk Suggested Control Measures	
Step No	List activity steps	List task steps	Potential dangers that could cause harm. List the potential hazards	Potential Risks due to Hazard	PROB	CON	Ranking	Controls already in place to mitigate the hazard before work may commence
	Asbestos Work	The asbestos area must be cleaned and must be demarcated as an asbestos area	Asbestos fibre release	Occupational illness and disease (asbestosis)	5	5	25	 Barricading accesses to asbestos area. Asbestos area to be cleared and to be safe for access.
			Employees exposed to asbestos could possibly accumulate occupational illnesses and diseases	Occupational illness and disease (asbestosis)	5	5	25	 Asbestos areas to be clearly demarcated with mandatory asbestos signage. Clearance inspections and
				Legal liability claims	4	5	20	 certificates to be issued before handing over a section. Asbestos signage to be displayed
		Removal of material containing asbestos	Employees not wearing the correct personal protective equipment	Exposure to asbestos fibres leading to an Occupational illness and disease (asbestosis)	3	5	15	 All employees to wear the mandatory asbestos PPE in Asbestos work area
18			Not placing asbestos material in designated area / skip	No control over asbestos material leading to incorrect disposal and legal liability claims	3	5	15	 Asbestos containing material to be placed in a designated area. Inventory list to be compiled and updated regularly Proper and constant supervision Training to staff
		Double bagging of material	Damaged asbestos bags can cause people from site to be exposed to asbestos and cause health hazard	Exposure to asbestos fibres leading to an Occupational illness and disease (asbestosis)	3	5	15	 Ensure asbestos PPE is being worn by workers at all times. FFP2 respirators mandatory. Asbestos panels to be lowered to ground by ropes and intact. Monitor wind speeds and stop work when wind is above 30km/h. Line asbestos skips with 250 micron plastic sheeting and cover panels when completed with task. Plastic bags must be sealed and must be identified as asbestos with asbestos labels The asbestos skip must be closed and locked when vacated.
